P. Spathelf (Ed.)

Sustainable Forest Management in a Changing World: a European Perspective

With its 250-year history, Sustainable Forest Management (SFM) is now viewed as a model for managing forests worldwide. Yet despite the frequent use of the term there remain many questions concerning its meanings, criteria as well as its practical application. This book explores the current potential of SFM within the context of the rapid changes occurring in our natural and social environment, and examines the broad range issues – climate change, finance, governance, policy, certification, reduced-impact logging, non-timber products and services and stakeholder participation in land-use decisions – within the context of forest use, functions and conservation. With contributions from high-level representatives from the World Bank, FAO, IUCN and UNEP, as well as from leading academics – and including case studies from Europe and the tropics – this timely synthesis will provide a valuable reference for advanced students and researchers interested in forest and natural resource management, participatory and extension research, forest ecology and ecosystem services, functions and values, as well as for those involved in forest policy at local, regional and international levels. Every so often, a discipline should take stock where we are... more on http://springer.com/978-90-481-3300-0

▶ Introduces new approaches to some of the key issues in Sustainable Forest Management (SFM), including technical developments and participatory processes ▶ The book is timely ▶ Draws together a range of issues facing SFM from biological, social and economic perspectives
